# Foreword

This booklet gathers the courses that are taught in English at Polytech Orleans.

In the first part, “*teaching packages*” corresponding to different majors in Engineering are proposed. The student can choose one of them: they include all the courses for one semester at Polytech Orleans for each major. They are fully taught in English. By selecting a “teaching package”, the student makes sure that there will not be any class schedule overlap. The total number of credits in “teaching packages” is about 30 ECTS.

In the second part of the booklet, a list of courses that are fully or partially taught in English are also listed with their corresponding number of ECTS.

Note that it is also possible attend courses in French for foreigners to complete your learning agreement.

	Extra courses at the French Institute (65€/ semester)	ECTS
1	Written French	2
2	Oral French	2

Automotive Engineering and Sustainable Mobility (AESM)		1AE01	Semester 1	
Trends in Automotive Transportation and sustainable Mobility				
Supervisor: Luis LE MOYNE		ECTS: 1		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>• Understand transport geo-politics.</li><li>• Understand the inventory of resources.</li><li>• Recognize operational actors in the transport sector.</li></ul>				
Syllabus				
<ul style="list-style-type: none"><li>• Sustainable mobility.</li><li>• Environmental incentives.</li><li>• Well-to-wheels CO2 analysis.</li><li>• Areas for technology improvements.</li></ul>				
Grading				
Written exam				
Learning hours				
Lectures 10h00	Tutorials 0h00	Lab sessions 0h00	Free labs 1h15	Project 0h00
In person teaching: 10h00				
Taught in English:   		SD/SR:	  	Innovation:   

Automotive Engineering and Sustainable Mobility (AESM)		1AE02	Semester 1					
Scientific pre-requisite								
Supervisor: Meryem JABLOUN		ECTS: 5						
<b>Skills</b> At the end of this course, engineering students will be able to: <ul style="list-style-type: none"><li>Acquire skills and an understanding of mathematical tools necessary for studying and exploring characteristics of linear systems.</li></ul>								
<b>Syllabus</b> <b>Fourier series decomposition</b> Perform Fourier Series decomposition on continuous-time periodic signals and understand Gibbs phenomenon <b>Linear differential equations</b> Solve linear differential equations: 1st and 2nd order cases: illustration and application to physical systems								
<b>Grading</b> Written exam								
<b>Learning hours</b> <table><tr><td>Lectures 28h45</td><td>Tutorials 21h15</td><td>Lab sessions 0h00</td><td>Free labs 1h15</td><td>Project 0h00</td></tr></table> In person teaching: 50h00				Lectures 28h45	Tutorials 21h15	Lab sessions 0h00	Free labs 1h15	Project 0h00

Automotive Engineering and Sustainable Mobility (AESM)		1AE03	Semester 1	
Electrical engineering				
Supervisor: Emmanuel BEURUAY		ECTS: 5		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>• Understand electrical and magnetism principles occurring in electrical motors divided in two parts: electrical motors and the dedicated converters.</li><li>• Understand the inner working of continuous and synchronous motors.</li><li>• Quantify the electrical efficiencies using active power, reactive power, apparent power, distortion power and power factor.</li></ul>				
Syllabus				
<ul style="list-style-type: none"><li>• Power: quantifying yields and efficiencies.</li><li>• Active, reactive, apparent, distortion power, power factor.</li><li>• Three phased system grid.</li><li>• Harmonic aspects in power and electromagnetic pollution.</li><li>• Magnetism applied to electrical motors. Loss reduction in permanent magnet rotors of synchronous machines.</li><li>• Continuous motors and AC/DC, DC/DC converters integrated power electronics. Step down and the step up chopper structures.</li><li>• Synchronous motors in servo synchronous machines with Pulse Width Modulator frequency converter.</li><li>• Four practical sessions illustrate three kinds of motors and transformer needed in industrial processes.</li></ul>				
Grading				
Written exam, Oral exam

In person teaching: 50h00				
Taught in English: 100%		SD/SR:		Innovation:

Automotive Engineering and Sustainable Mobility (AESM)		1AE04	Semester 1	
IT: programming				
Supervisor: Rachid JENNANE		ECTS: 5		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>Analyze a problem</li><li>Propose an algorithm</li><li>Develop an architecture for a problem</li><li>Use a development environment and a C/C++ compiler</li></ul>				
Syllabus				
Basics				
<ul style="list-style-type: none"><li>Structure of a program in C language</li><li>Basic elements (character, type, constants, variables, blocs, etc.)</li><li>Instructions and Operators</li><li>Conditional structures, iterative structures and connections, etc.</li><li>Pointers and dynamic variables</li><li>Arrays</li><li>Strings</li><li>Functions, passing parameters: by value, by reference and by address</li></ul>				
Object oriented programming				
<ul style="list-style-type: none"><li>Structure of a program in C++ language</li><li>Classes</li><li>Member variables and member functions</li><li>Specialized constructors</li><li>Overloaded functions and operators</li><li>Data stream</li><li>Abstract class</li><li>Generic classes</li></ul>

In person teaching: 50h00				
Taught in English: 		SD/SR: 	Innovation: 	

Automotive Engineering and Sustainable Mobility (AESM)		1AE05	Semester 1	
Advanced physics				
Supervisor: Azeddine KOURTA		ECTS: 5		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>• Understand the inner working of power electronics</li><li>• Understand basic automotive aerodynamics</li><li>• Solve 1st and 2nd principle based thermodynamic problems</li></ul>				
Syllabus				
Power electronics				
<ul style="list-style-type: none"><li>• Semi-conductor physics</li><li>• Power MOS</li><li>• IGBT</li></ul>				
Automotive aerodynamics				
<ul style="list-style-type: none"><li>• Basics of aerodynamics</li><li>• Specificities of automotive aerodynamics</li><li>• Wind tunnel experiments</li></ul>				
Thermodynamics				
<ul style="list-style-type: none"><li>• 1st and 2nd principle of thermodynamics</li><li>• Ideal gases</li><li>• Basic engine cycles</li></ul>				
Grading

Automotive Engineering and Sustainable Mobility (AESM)		1AE06	Semester 1	
French culture and language				
Supervisor: Geanina BOUTONNE		ECTS: 4		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>• Understand spoken french and speak basic sentences.</li><li>• Read and write basic french.</li><li>• Hold a basic conversation.</li></ul>				
Syllabus				
<ul style="list-style-type: none"><li>• French language sounds</li><li>• French grammar</li><li>• French conjugation</li><li>• Interactive discussions in French</li></ul>				
Grading				
Written exam, Oral exam

Taught in English:		SD/SR:	Innovation:	

Automotive Engineering and Sustainable Mobility (AESM)		1AE07	Semester 1	
Vehicle Dynamics 1				
Supervisor: Pascal HIGELIN		ECTS: 5		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>• Understand vocabulary, technology and general issues and goals of vehicle dynamics applied to passenger cars.</li><li>• Choose and model a tire. Design or choose front and rear axles technologies according to an expected behavior. Design suspension systems and anti roll bars.</li><li>• Model the behavior of a car using several numerical models, and compare them to real world test measurements.</li><li>• Conduct experimental measurements on a real axle or a complete vehicle to obtain the variation of the geometrical characteristics length and angles for roll, pumping and pitching.</li></ul>				
Syllabus				
<ul style="list-style-type: none"><li>• Generalities: SAE Coordinate System. Definition of specific vocabulary. Motion variables. Basic geometry of an Axle (toe, caster, camber, kingpin etc. ) and its effect on drivability.</li><li>• Tire: Constitution and behavior. Vertical, longitudinal and lateral modelling. Auto-align torque. Pacejka Model and introduction to TM Easy Model.</li><li>• Axle: Kinematics modelling of various axle using the theory of the mechanism. Suspension steer and roll properties. Analysis of the design effects on the change of characteristic angles and length (toe, camber etc.) as a function of pumping and rolling. Roll Center of an axle.</li><li>• Vertical behavior and suspension design. Spring and shock absorber design for sprung mass, un-sprung mass control in the case of pitching and pumping behavior.</li><li>• Transversal Behavior: Ackermann Geometry. Jeantaud's steering system. Bicycle Model. Over steer coefficient, characteristic speed, yaw speed gain. Roll Stiffness of an axle. Roll Flexibility. Lateral Load Transfer. Anti-roll bar design.</li><li>• Numerical simulations and comparison to real test results using several models (Simulink, Thesis).</li><li>• Practical work 1: Experimental measurements and modeling of the kinematics roll effects on camber and steering angle for the H-Frame axle.</li><li>• Practical Work 2: Experimental measurement of suspension steer, roll effect and pitch effect on the geometrical characteristic angles, for a complete car, in case of pure pumping.</li></ul>				
Grading				
Written exam, Oral exam, Report

Lectures 35h00	Tutorials 22h30	Lab sessions 7h30	Free labs 0h00	Project 0h00
In person teaching: 65h00				
Taught in English: 		SD/SR: 	Innovation: 	

Automotive Engineering and Sustainable Mobility (AESM)		1AE08	Semester 1	
Internal combustion engines				
Supervisor: Pascal HIGELIN		ECTS: 5		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>Understand the physical and chemical processes occurring during combustion and scavenging in internal combustion engines. Understand the behavior of an engine when changing its settings using modeling.</li><li>Be able to build an internal combustion engine model. Be able to optimize the size and settings of an engine performance under efficiency, power, emission constraints using modeling.</li></ul>				
Syllabus				
<ul style="list-style-type: none"><li>Combustion: Thermochemistry and Kinetics applied to combustion. The self-ignition. Premixed flames, flammability limits, flame stability, turbulent combustion. Diffusion flames, biphasic combustion. Internal aerodynamics of an engine. Mixture preparation, requirements of spark ignition and self-ignition, initiation and propagation of combustion (definition of core burning speeds), formation of pollutants. Identification of engine manufacturers needs in terms of fundamentals.</li><li>Thermodynamic models: Classification of thermodynamic models: air cycle models, one and two zone models, multizone models. Combustion chamber walls losses models. Limits of validity.</li><li>Combustion models: semi-empirical combustion models, application to spark ignition engines. Extension to compression ignition engines. Combustion models for spark ignition engines. Combustion models for compression-ignition engines (spray patterns, combustion models in the premix and diffusion phase).</li><li>Scavenging models: filling/emptying models and acoustic 1D intake/exhaust. Boundary conditions: open tubing, closed, partially open junctions. Consideration of thermal losses and friction to the walls. Filling efficiency curves reconstruction.</li><li>Specific Tool: Matlab/Simulink, GTpower, CHEMKIN.</li></ul>

Automotive Engineering and Sustainable Mobility (AESM)		2AE01	Semester 2		
Acquisition systems and signal processing					
Supervisor: Philippe RAVIER			ECTS: 5		
Skills					
At the end of this course, engineering students will be able to:					
<ul style="list-style-type: none"><li>• Mastering Analog to Digital conversion for digital systems</li><li>• Mastering the Fourier Transform for spectral analysis of the data</li><li>• Selecting and implementing an FIR or IIR filter on a dedicated hardware or software architecture</li></ul>					
Syllabus					
Signal processing basics					
<ul style="list-style-type: none"><li>• Analog and digital representation, Shannon theorem</li><li>• Time and frequency representation</li><li>• Fourier transform</li><li>• Noise processing</li></ul>					
Digital filtering					
<ul style="list-style-type: none"><li>• Z transform for digital signals</li><li>• Transverse filters</li><li>• Recursive filters</li></ul>

Automotive Engineering and Sustainable Mobility (AESM)		2AE02	Semester 2	
Real Time Programming				
Supervisor: Raphaël CANALS		ECTS: 5		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>• Mastering techniques for the implementation of digital systems</li><li>• Understanding and implementing hardware and software for real-time systems</li><li>• Controlling the CAN and FlexRay communication buses</li></ul>				
Syllabus				
Digital systems				
<ul style="list-style-type: none"><li>• Number coding and algebra.</li><li>• Analog-to-digital and digital-to-analog conversions.</li></ul>				
Electronic components				
Microcontrollers: applications in automobile.				
Microcontrollers: structure and implementation.				
Architecture of a microcontroller board.				
Role and place of an OS on a processor board.				
Architecture of an OS.				
Calls to OS functions.				
Automotive communication buses				
CAN and FlexRay buses architecture.				
Communication protocols.

Automotive Engineering and Sustainable Mobility (AESM)		2AE03	Semester 2
Control & Simulation of Powertrains			
Supervisor: Alain CHARLET		ECTS: 5	
Skills			
At the end of this course, engineering students will be able to:			
<ul style="list-style-type: none"><li>• Understanding why and how hybridization works</li><li>• Understanding where energy is lost in a car vs driving conditions</li><li>• Being able to build a simple model of a car and its control</li></ul>			
Syllabus			
Part 1: Control of powertrains			
Anti-lock Bracking System (ABS) & Cruise control. This study is performed in simulation with the software Matlab/Simulink.			
Part 2: Simulation of powertrains			
An overview of electric hybrid powertrains is proposed.			
Then, students work on a simulation platform (Simcenter AMESim by Siemens) where they have to build an energy balance of a conventional vehicle.			
This study is completed by two practical classes on a rolling test bed where students measure energetic performances of a conventional car vs hybrid car (Toyota Yaris)

Automotive Engineering and Sustainable Mobility (AESM)		2AE04	Semester 2	
Project				
Supervisor: Pascal HIGELIN		ECTS: 10		
Skills				
At the end of this course, engineering students will be able to:				
<ul style="list-style-type: none"><li>• Split a complex task into subtasks. Plan and schedule tasks.</li><li>• Work as a group. Assign tasks to members of the group taking dependencies into account</li><li>• Select the more adequate modeling level and simulation tool</li><li>• Present work performed in a concise way focusing on the most important aspects</li><li>• Build working powertrain and vehicle dynamics models based on experimental data</li></ul>				
Syllabus				
<ul style="list-style-type: none"><li>• Reformulation of project subject</li><li>• Split subject objectives into tasks and sub-tasks</li><li>• Schedule tasks and assign them to project members</li><li>• Report work performed, current state and upcoming tasks every 2 weeks</li></ul>
